

Useful things for the new CV Enterprises portfolio manager:

****bolded + italicized = folder/file name**

The current website was built from a template I found online. There are some extra files that I don't use, but are still in **CV Enterprises**. <http://cv-enterprises.herokuapp.com/index.html>

CV ENTERPRISES ACCOUNTS

- “CV Enterprises” google/youtube/gmail: crvaenterprises@gmail.com
 - Password: Falcon@20
- Heroku Account
 - Password: Falcon@20

STYLE CHOICES

- On ***index.html***, for the Featured Projects section, the images used for the projects must have the dimensions of **653 x 520** (or something scaled of the same ratio; i.e. multiplying both dimensions by 0.75). I did this by opening up [Lunapic](#) since it was easier for me to do this with the Simple Crop Tool
- For the project pages (the ones I named with a 1 in front of, i.e. ***1community***) sometimes images work when editing them, but when I push it to heroku it doesn't appear. Injury Tracker's project page is an example of that
- For videos:
It seems that all videos share the same designated background image- so every video on the site shares the same thumbnail, it doesn't automatically grab a frame from the video. A temporary change: I pretty much just set the background to #000000, which is black.
- Blue color hex code used in website theme: **0081c7** (old orange color was f7631b)
 - Did this by going into **css** → **main.css** and manually replacing orange hex code with blue hex code

HOW TO/EXPLANATIONS

- Resources used to create certain effects:
 - <https://blog.teamtreehouse.com/deploy-static-site-heroku>
 - Scrolling effect
<https://stackoverflow.com/questions/25020582/scrolling-to-an-anchor-using-transition-css3>
 -
- Pushing website/Heroku Instructions (type in terminal)
 - *make sure to login to heroku

- *make sure that you have the correct path to the folder that you want to upload (i.e. mine looks like: **C:\Users\miyah\OneDrive\Desktop\CV Enterprises>**)
 - *type the following
 - git add -A
 - git commit -m"*put what you updated/changed on the site*"
 - git push heroku master
- Videos:

Upload them onto the youtube channel. Make sure that the videos are public, and add them to the playlist for CV Enterprises projects.
- How to edit website:
 - Edit the html files
 - Push to heroku
- **CV Enterprises**
 - **downloads**

I put all the pdfs for the Project Schedules here. I made the pdfs by taking the jpgs sent to me, putting it onto a google doc, and saving it in the format of a pdf (File → Download as → PDF)
 - **index**

The main page with the the Featured Projects.
 - **contact**

How future customers can contact us. The message box is not fully functional and only refreshes the page.
 - **comingsoon**

A substitute page. When the page you're working on is not ready yet, link to this page instead.
 - **projects**

**incomplete: Not in place yet, but has all the projects for CV Enterprises organized.
 - **team**

**incomplete: Not in place yet, but will have pictures of all CV Enterprises members with a link to their resumes.
 - **about**

**incomplete: Not in place yet, but will have extra information about CV Enterprises. (i.e. mission statement, goals, etc.)
 - **gallery**

**incomplete: Not in place yet, but will have pictures of team gathered from working on projects. It would be interesting if CV Enterprises had an unofficial student photographer position.
- **CV Ent Toolbox**

This is basically any extra images, videos, original files I've edited, sources, etc. I put these things here in order to have more file space/get rid of unnecessary stuff that may be useful in the future.

- **education-master**
Original website template. Refer to this when stuck on how to format/add features to website.
 - **extra img**
The original images sent to me by CV Ent members for their projects. Stored here in case needed in the future.
 - **video**
All the videos from CV Ent members are stored here. The file sizes are too large to be able to push each time.
 - **CVENT backup**
Dinosaur version of current version.
- Getting own domain name: couldn't finish before end of 2018-2019 school year
Once the site is ready, do this with Dr. Neat
 - Check if cv-enterprises.org is taken already, purchase if so

Last statement:

Since I'm learning how to use heroku and git to get this website up, there may be some stuff I did in the code/this doc that may seem confusing. Generally, I commented where I made changes in the files and commented out things that were on the original template that I thought were unnecessary to our website. I kept it there in case for future reference. Also, with the spaghetti code, ctrl + f will be your friend to find stuff.

Email me at miyahiguchi@gmail.com if you have any questions. Good luck!
